

Thanks for installing the asset!

Briefly about how to use the main scripts:

1. Materials                    - blur material, changing the value of the radius of which you can adjust the intensity of the blur;
2. Scenes                      - 2D and 3D scenes to demonstrate the capabilities of the asset;
3. Scripts                      - script that allows you to control the demo scenes.

All blocks in scripts are commented out, so I think there will be no problems. Otherwise, write to the mail [isleofassets@gmail.com](mailto:isleofassets@gmail.com)

Please do not forget to rate this asset in the Asset Store! :)
